

FACT SHEET
EC01

NON-MONITORED EMERGENCY CALL SYSTEMS

A non-monitored emergency call system is an automated telephone (Autodialler) connected to the telephone network (via landline or mobile network).

When an incident occurs, the device dials through to the programmed emergency contacts or sends a voice or text message to the telephone number of a person willing to help (e.g. family, friends, neighbour, aged care village manager, Triple Zero). Systems will cycle through the list of emergency contacts a number of times or until the call is answered.

Ambulance Service

When including Triple Zero (000) in the programmed number sequence, it is essential to activate caller ID on the telephone so that the call can be identified.

A pre-recorded message should also be developed and contain the person's name, full address, access information and instructions regarding possible voice contact. An example of a pre-recorded message: "This is (Name) of (full address including State), I have activated my (Name of pendant) Smart Dialler and may need emergency help. Press the star key on your phone to speak with me, if you do not receive my response then please take action to ensure my well-being. Should this message reach the Emergency Service Operator please connect this call to the Ambulance. Repeating again my name is (Name) of (full address including State), for verification please press the Star key now to try to speak with me."

Key Safes: You can register your key safe details into the Queensland Ambulance Computer Aided Dispatch (CAD) System by calling 13 74 68. They will request the following details: Patient name, Patient address, detailed location of the key safe and the code for the key safe. **National Broadband Network:** The NBN recommends that you register your alarm online or by calling 1800 227 300. They also recommend contacting your existing alarm provider to ask: Will my alarm work properly when connected to the nbn network? Will my alarm be able to dial out during a power outage when connected to the nbn network? What alternatives are there to using a landline connection?

What can I choose from:

Supplier/brand	Device	Options	On Activation	AdditionalFeatures
Care Alert 1300 75 85 95 www.carealert.com.au	Smart Dialler	Pendant comes with a necklace or wrist strap option and can operate up to 150m from the basestation	Notifies people of your choice in the event of an emergency Can contact Triple Zero	Can be set up as a monitored unit with no lock-in contracts
